

SAREE INVENTORY • LOSS PREVENTION • MARGIN •

Know every saree. Protect every **rupee.**

Turn a hand-counted saree floor into a system that tracks every piece, every rupee — what came in, what sold, what's sitting dead, and what walked out the door.

SKU-level tracking

Loss prevention

Fast intake

PRESENTED BY
[Your Company]

~1 lakh sarees. Stock by the truckload. Tracked **by hand.**

Ask the owner a simple question — how many of this design came in, how many sold, how many are left — and the honest answer is a guess. The register can't keep up with the floor.

DESIGN SA-014 · ARRIVED

100

sarees received off the truck

WEEK 1

-25

sold · best sellers move first

WEEK 2

-10

sold · pace is slowing

LEFT ON THE FLOOR

15

but which 15? No one can say.

By hand a ledger and memory can't track 1 lakh pieces per design, per rupee, per day.

Two leaks that never show up on a report.

LEAK 01 • DEAD STOCK

Capital, frozen

Some sarees have sat on the shelf for **1.5 years** — money locked in fabric nobody is buying, and nobody knows which pieces or how much. Every dead design is a rupee that can't be reordered as a fast-mover.

Money sitting still

Dead stock ages silently while the owner reorders blind.

LEAK 02 • COUNTER FRAUD

Margin, walking out

A clever customer peels the tag off a ₹2,000 saree and sticks it on a ₹10,000 one. It scans, it bills, it leaves — and **₹8,000 of margin walks out the door** with a smile. No alarm, no record.

₹10,000 → billed ₹2,000

One tag-swap at the counter, repeated, bleeds the floor dry.

One system, from the truck to the bill. Only the tag changes.

Intake

Truck arrives.
Batch-enter, tag,
shelve.

THE SPINE — IDENTICAL IN EVERY TIER

SKU ledger

SA-001...

Cost / price

per piece

Ageing

days on shelf

Margin

per SKU

You buy the **spine** once. Lite, Pro and AI all run on it — so moving up a tier means better tags, never re-buying software.

Counter

Scan, verify,
GST invoice,
UPI QR.

The four questions your floor can't answer today.

In vs. sold

Per design, not just totals — what arrived, what sold, what's left, this week.

Fast vs. dead

Fast-movers to reorder, dead stock ageing on the shelf — flagged automatically.

Cost vs. price

Purchase cost against sale price = real margin per SKU and per category.

Every piece, coded

Each saree carries a code that flows to the bill.SA-001 sold · SA-002 sold

Good, better, best — same spine, three tiers.

APPROACH A

Lite

barcode label + scan

SKU tracking, full reports and software photo-match fraud check. Lowest cost, fastest to go live.

₹

APPROACH B

Pro

RFID / EAS hard tag

Tamper-proof tags that kill tag-swap physically, carton-speed intake and an EAS door gate. The loss-prevention answer.

₹₹

★ recommended next step

APPROACH C

AI

suite + intelligence

Demand forecast, photo catalog, WhatsApp catalog, and ties into EnquiryPilot + QuickBillPro. The growth horizon.

Lite

START HERE

Barcode label + scan. Lowest cost, fastest live.

-  **Thermal hang-tag** on the fold/knot with a kimble loop — no needle through the fabric.
-  **Bulk-print from the supplier invoice** — generate SKUs, print the run, tag as you unload.
-  **Scan at billing** → cart → GST invoice + UPI QR. Full stock, ageing and margin reports.
-  **Software photo-match** — the saree's picture pops up at billing; a swapped tag shows the wrong photo and the cashier catches it.

Pro

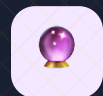

★ RECOMMENDED

RFID / EAS hard tag. Tamper-proof, truck-speed.

-  **Tamper-proof hard tag** — pinned through the fold, removed only by the in-store detacher. Kills tag-swap physically.
-  **RFID reads a whole carton at once** — wave a bundle past the reader, 50 sarees register in seconds. Truck-speed intake.
-  **EAS door gate** — an un-billed saree passing the door sets off the alarm. Theft protection on top of swap protection.
-  **Stock-take a rack in minutes**, not days. Tags are reusable — released at the counter, used again.

Everything in Pro, plus an intelligence layer that turns your stock data into decisions.

Demand forecast

Predicts movers — auto-reorders fast sellers, flags ageing stock for markdown before it dies.

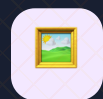

Photo catalog

Every saree shot at intake; AI tags colour, fabric and design for instant visual search.

WhatsApp catalog

Push fast-movers and clear slow-movers straight to customers on the channel they use.

Suite tie-in

Connects to EnquiryPilot and QuickBillPro — enquiry to quote to order to bill.

Every worry you raised — already answered.

THE CONCERN	OUR ANSWER
<i>"Tagging 10,000 sarees off a truck is slow."</i>	Pre-generate SKUs from the supplier invoice and bulk-print (Lite); RFID reads a whole carton at once (Pro). Tag as you unload.
<i>"A pin will damage the saree."</i>	A kimble loop through the fold / knot — the tassel end, never the body. Exactly what you proposed; standard textile practice.
<i>"A cheap label gets peeled and swapped."</i>	Tamper-evident labels + photo-match at the counter (Lite); a non-removable RFID / EAS hard tag (Pro).
<i>"Someone swaps the whole item or box."</i>	Counter photo-match is the moment of truth — the scanned saree's picture must match the one in hand. The EAS gate stops un-billed items leaving.

Pick the tier the floor needs today.

	Lite	Pro ★ recommended	AI
SKU-level tracking	✓	✓	✓
Fast intake	type / print batch	bulk RFID read	RFID + photo
Tag-swap fraud	software photo-match	physical, tamper-proof	physical + AI anomaly
Theft at door (EAS gate)	—	✓	✓

WhatsApp catalog / suite	—	—	✓
Relative cost	₹	₹₹	₹₹₹
Time to live	days	2-3 weeks	phased

Start on Lite, design for Pro.

The spine is identical, so the tamper-proof upgrade is an add-on — never a re-purchase. Lite answers every information question now; Pro is the loss-prevention next step; AI is the horizon.

Lite — now

SKU tracking, reports, margin, photo-match fraud catch.

Pro — next

Tamper-proof tags, RFID intake, EAS gate. Add-on, not re-buy.

AI — horizon

Forecast, photo catalog, WhatsApp, suite tie-in.
